

Please send **VECTOR** files only

(Preferably Adobe Illustrator*)

A 'vector' file is line art and not affected by pixellation. In order to cut logos from vinyl we need to create a line from which to cut. All drawing software such as Adobe Illustrator or Corel Draw creates vector art. Photoshop files or image files such as Jpegs or Tiffs, or anything copied from a website are NOT vector art.

If you can not provide a vector file - we will need to create one. In order to do this, we will need a high resolution bitmap (Jpeg, Tiff, PSD) which we can trace.

Please note this process requires artwork time from our designers which will be charged at an hourly rate**

*Please save down to CS4 - thanks!

**Depending on the complexity of the logo this may not be a feasible option. Please ask advice from your account manager for other options

Please note that any files submitted which require changes from our art department will be charged at an hourly rate

Any questions please call.
